Phishing Email Analysis Report

1.Incident summary

Incident Type: Phishing Email
Date of Analysis: 18 March 2026
Analyst: Lokesh

The email claimsthat the recipient's PayPal account has been limited and asks the user to verify account information through a suspicious link. The email shows several phishing indicators including domain spoofing, urgent language, and a malicious URL.

2.Email Details

FIELD	VALUE
SENDER	security@paypal-support.com
REPLY-TO	support@secure-paypal.com
SUBJECT	Urgent Action required-Your PayPal Account Has been Limited
TARGET	user@example.com

3.Email Content

Dear Customer,
We detected unusual activity on your PayPal account. Your account has been temporarily limited for security reasons.
To restore your account access, please verify your information immediately.
Verification link:
http://paypal-account-security-check.com/login
Failure to verify within 24 hours may result in permanent suspension.

4.Indicators of Phishing

- **Domain Spoofing**
  - The sender domain is: Paypal-support.com
  - The letter **I** is used instead of **l** in "PayPal".
  - Real domain: paypal.com

  This technique is called **typosquatting**.

- **Suspicious URL**

  Malicious link found in the email: http://paypal-account-security-check.com/login

Indicators:

Not an official PayPal domain
Contains suspicious keywords
Likely credential harvesting page

- **Urgent Language**

The email creates panic using phrases like:

- "Urgent Action Required"
- "Verify within 24 hours"
- "Permanent suspension"

Attackers use urgency to force victims to click quickly.

- **Generic Greeting**

The Email user: Dear Customer
Legitimate companies usually address users by name.

5.Indicators of Compromise

IOC TYPE	VALUE
MALICIOUS DOMAIN	paypal-account-security-check.com
SPOOFED EMAIL	security@paypal-support.com
REPLY-TO-ADDRESS	support@secure-paypal.com
PHISHING URL	http://paypal-account-security-check.com/login

6.Risk Assessment

Severity Level: **High**

Potential Impact:

1. Credential theft

2.Unauthorized account access

3.Financial fraud

7. Recommended Actions

1. Block the malicious domain in email gateway.
2. Block sender email address.
3. Add domain to threat intelligence feeds.
4. Warn users about phishing campaigns.
5. Monitor network traffic for related connections.

8. Conclusion

The analyzed email is a **phishing attempt designed to steal PayPal login credentials**. Multiple phishing indicators such as domain spoofing, malicious URL, and urgent messaging confirm the malicious intent.

The email should be **blocked and reported to the security team immediately**.
