# Phishing Email Indicators

## 1.Suspicious Sender Email Address

Attackers often use domains that looks similar to legitimate ones.
**Example:** support@arnazon.com
"rn" is replaced with "m" in amazon.
**Real company: amazon**
This technique is called typosquatting.

## 2.Missmatch Between Display Name and Email

**Example:**
**Display Name:** Amazon Security
**Email:** randomname@gmail.com
Legitimate companies do not send security alerts from Gmail.
**Example:** random@gmail.com
They send emails through their company domain.
**Example:** random@amazon.com

## 3.Suspicious Links

Phishing Email contains fake login pages.
**Example:**
http://security-account-amazon.com/login
**Real Domain:**
https://amazon.com/login
You can check suspicious URLs using:
Virustotal

## 4.Urgent or Threatening Language

Phishing Emails often create panic.
**Example:**

- "Your account will be suspended"
- "Verify within 24 hours"
- "Immediate action required"

This forces users to act without thinking.

## 5.Gerenic Greetings

Phishing emails often avoid personal names

**Example:**

- Dear Customer
- Dear User
- Dear Member

Legitimate companies usually use your registered name.

**Example:** Dear [your name]

## 6.Suspicious Attachments

Phishing emails may contain **Malicious** files.

Common malicious attachments:

| FILE TYPE | RISK |
|---|---|
| .ZIP | Malware |
| .DCOM | Macro malware |
| .EXE | Trojan |
| .HTML | Fake login page |

Attachments can be analyzed using:

- ANY.RUN sandbox.

## 7.Email Header Anomalies

SOC analyst inspect email headers for spoofing.

**Important fields:**

- SPF
- DKIM
- DMARC
- Originating IP

You can analyze headers using:

- MXToolbox

## 8.Suspicious Domain Age

Phishing domains are usually very new.

**Example:**

- created: 2 days ago

Legitimate domains like Amazon have existed from many years.

## 9.URL Shorteners

Attackers hide malicious links using shorteners.

**Example:**

- bit.ly/verify-account

## 10.Requests for Sensitive Information

**Phishing emails may ask for:**

- passwords
- Credit card numbers
- Bank details
- OTP codes

Legitimate companies never request such information via email
